

Liling Jialong Porcelain Industry Co.,Ltd.'s Sustainable Development Plan

In response to the growing global emphasis on sustainability and decarbonization, Liling Jialong Porcelain Industry Co.,Ltd. is committed to taking proactive steps in the next three years to reduce its environmental impact and contribute to a greener future. The following are the key initiatives we plan to implement:

Optimize Packaging Materials and Design

Over the next three years, Liling Jialong Porcelain Industry Co.,Ltd. will allocate a certain amount of funds to gradually upgrade its packaging materials. We aim to replace traditional non - eco - friendly packaging with recyclable and biodegradable alternatives. For instance, single - use plastic wraps will be replaced with paper - based or bio - based materials. Although there will be initial costs associated with sourcing new packaging materials and redesigning the packaging structure, this change will not only help us reduce our carbon footprint but also cut down long - term packaging expenses.

Simultaneously, we will focus on optimizing the packaging design.

Through precise measurement of porcelain products' dimensions, we will adopt more space - efficient packaging methods. This will lead to a reduction in the volume and weight of goods during transportation, thereby minimizing transportation - related energy consumption and carbon emissions.

Upgrade Logistics and Transportation Strategies

Our company will actively engage with logistics partners to optimize transportation routes and modes. We plan to encourage the use of more fuel - efficient vehicles and explore the possibility of incorporating electric or hybrid trucks into our transportation fleet. By promoting the sharing of transportation resources and more efficient loading and unloading operations, we aim to reduce the number of transportation trips and lower overall carbon emissions.

In addition, we will work with logistics providers to improve the energy efficiency of their operations. This includes regular vehicle maintenance to ensure optimal fuel consumption, as well as the adoption of advanced logistics management systems to streamline transportation processes and minimize unnecessary detours.

Strengthen Green Management of Suppliers

When selecting new suppliers, Liling Jialong Porcelain Industry Co.,Ltd. will give priority to those with strong environmental records and sustainable production practices. We will also encourage our existing suppliers to adopt more environmentally friendly production techniques and reduce their energy consumption.

To achieve this, we will establish a comprehensive supplier evaluation system that includes environmental performance as a key criterion. We will work closely with suppliers to provide them with support and guidance on environmental improvements, such as sharing best practices in energy - saving and waste reduction.

Enhance Employees' Environmental Awareness and Capabilities

We recognize that employees play a crucial role in our sustainability efforts. Therefore, over the next three years, we will invest in a series of training programs to enhance employees' environmental awareness and knowledge. These programs will cover topics such as sustainable production techniques, waste reduction, and energy - saving measures.

In addition to formal training, we will also promote a culture of environmental responsibility within the company. This includes encouraging employees to suggest and implement green initiatives in their daily work, and recognizing and rewarding employees for their contributions to environmental protection.

Liling Jialong Porcelain Industry Co.,Ltd. is confident that through these initiatives, we can make significant progress in sustainability and decarbonization over the next three years. We look forward to collaborating with partners and stakeholders to create a more sustainable future for the porcelain industry and beyond.

Liling Jilong Porcelain Industry Co.,Ltd.
